GPT - Generative Pre-Trained Transformer

LLM - Large Language Model

Machine Learning -

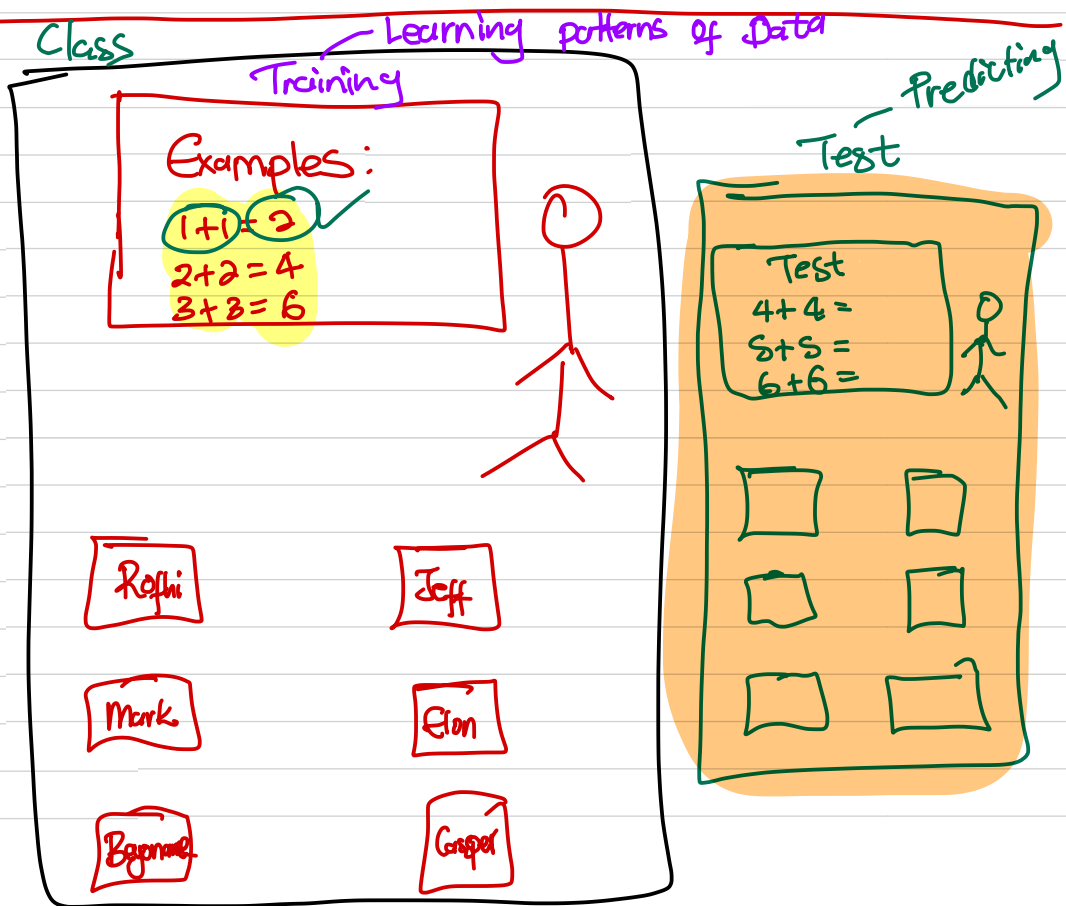

AI - Artificial Intelligence:

for an AI system to exist it needs to learn patterns from data.

↳ Training

Machine Learning - Enables a machine to learn patterns
- Learns patterns from data

Branch of Artificial Intelligence (AI) where computers learn patterns from data systems to make predictions

hallucinating - make things up that are incorrect

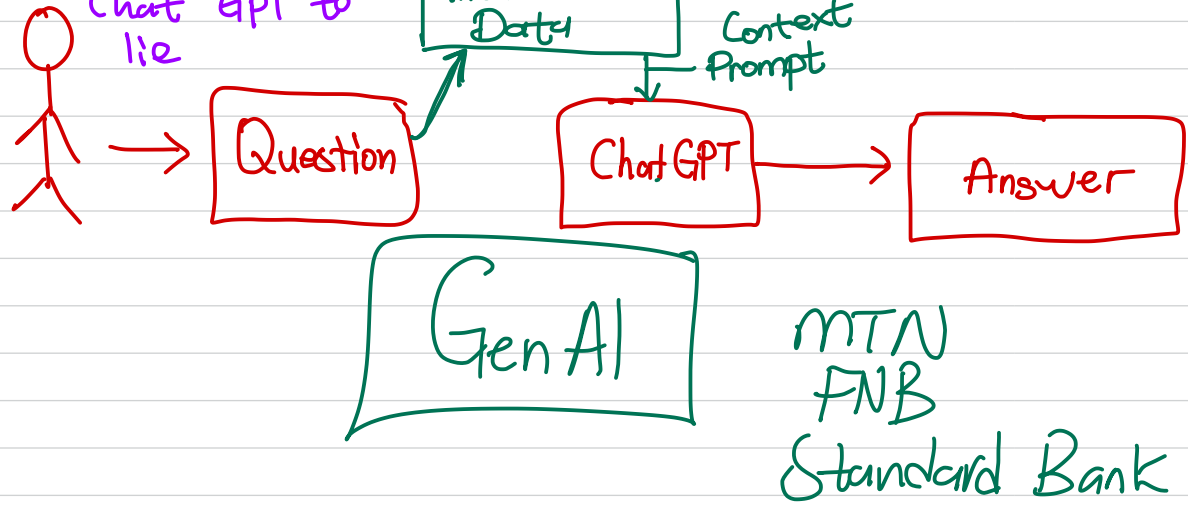

Solution
to hallucination

minimize hallucination

Chatbot

RAG - Retrieval Augmented Generation

We don't want
Chat GPT to
lie

- Tokens

- Tokenization

- Unstructured Data

- Embeddings

- Similarity Search

Prompt

Prompting

- a question
- instruction
- a command
- a guardrail
- a request

GenAI tool requires in order what a prompt to generate you need

Prompt Engineering

Clear instruction
Detailed instruction
Specific instruction

A way to construct an effective prompt to ensure clarity to the AI so that it does not give you the wrong answer

Different ways of prompting

① Few-Shot prompting

you give the LLM few examples so that it understands your question

Is a way of interacting with a LLM (GenAI) by asking it question and give it examples as part of the context for it to be able to understand what you want.

② Zero Shot prompting

↳ This is when you ask a question without giving any example.
↳ Direct

③ Contextual Prompting

↳ you give background information

④ Constraint-based prompting

↳ You limit the response
↳ Restriction based

↳ Controlling the kind of output you want from the LLM

→ Limiting the scope of the output.
